

TIBER SOFT

Stone-look floor and wall tiles for interiors

Novoceram, French ceramic manufacturer since 1863, presents a through-body coloured porcelain stoneware collection for indoor spaces, inspired by Roman travertine.

PRESS RELEASE

Tiber Soft is a porcelain stoneware collection by [Novoceram](#), offering a lighter interpretation of Roman travertine. A new addition to the Tiber collection, it captures the characteristic appearance of this stone through a **cross-cut** approach, revealing soft veining and more homogeneous tonal variations.

This interpretation of travertine highlights the stone's natural variations while maintaining a subtle and delicate surface. Tone-on-tone grouting follows the pattern of the material and enhances its details without creating overly pronounced contrasts.

Tiber Soft is available in two colours. **Blanc** offers a light, neutral shade close to ivory, bringing brightness and softness to interiors. **Beige** features a tone closer to natural stone, with a warm base and amber nuances.

The collection is available in a **9 mm thickness**, in **60×120, 80×80, 60×60, 30×60 and 10×60 cm** formats, as well as a **5×5 cm mosaic**. Depending on the format, Tiber Soft is available in an **R9** finish or an **R10 A+B** finish, meeting different indoor usage requirements.

To find out more about Tiber Soft and (re)discover all the Novoceram collections, visit our [official website](#) or join our [Facebook page](#) and [Instagram](#).

OUR CERTIFICATIONS:

- **ISO EN 9001**: standard that sets out the requirements related to the **company's quality management system** that is part of a continual improvement at all levels which include: customer relations, willingness to communicate, internal organisation, relations with suppliers and production processes.
- **ISO EN 14001**: standard that sets out the requirements related to the **environmental management system** based on **environmental commitment**, on strict standards and on increasingly ambitious goals that the company has implemented to control and reduce its impact on the environment and to continuously improve its performance.
- **ISO EN 50001**: standard that sets out the requirements related to **energy management systems**. This certification, driven by the wish to better control and optimise energy consumption, is the logical continuation of a continuous improvement approach and an environmental commitment.
- **ISO EN 17889-1**: standard that establishes requirements for **energy management systems**. This certification, motivated by the desire to better control and optimise energy consumption, is the logical next step in a process of continuous improvement and environmental commitment.

PRODUCT CERTIFICATIONS:

- **Indoor emissions**: index measuring emissions of volatile substances posing a risk of inhalation toxicity. All our tiles are assigned A+, - the best note in the classification. Furthermore, as **they do not contain Volatile Organic Compounds (VOCs)**, they even outperform all the requirements for the A+ classification.
- Novoceram products are involved in obtaining various ecological certifications for the construction industry such as the American certification, **LEED** (Leadership in Energy and Environmental Design). Novoceram has also established the **PEF** (Performance Environnemental Footprint) and **EPD** (Environnemental Product Declaration) of its products which indicate the potential environmental impact of a product throughout its entire life cycle.
